# **Cerberus FTP Server makes file sharing a breeze!**

February, 20th 2013

### **For Immediate Release**

Cerberus, LLC has released Cerberus FTP Server 6.0, a secure Windows FTP server providing enterprise-level features without requiring an enterprise support staff! Cerberus FTP Server's intuitive user interface is appealing to both novice file sharers and experienced system administrators.

Cerberus provides the advanced features that users have come to expect from a professional FTP and SSH File Transfer Protocol (SFTP) server, including sophisticated security and privacy controls, resuming failed file transfers, providing statistics on connections as well as incorporating robust logging capabilities, all within an easy-to-use manager for controlling user access to files and file operations.

Unique features that really set Cerberus above the competition include a powerful Web services application programming interface (API), integrated multi-domain and multi-server Active Directory and LDAP authentication, and an HTTPS web client that removes the need for customers to install a dedicated client application.

Cerberus FTP Server is available in Personal, Standard, Professional, and Enterprise editions and has optimized installs for both 32 and 64 bit architectures. You can download a fully-functional, 25-day trial version from <http://www.cerberusftp.com>. Cerberus FTP Server – Personal Edition is free for personal use and non-profit organizations.

For more information, contact Grant Averett, Email: [support@cerberusftp.com](mailto:support@cerberusftp.com). Web: <http://www.cerberusftp.com>.
